Recreational Boating Calculations

Days per year 365
lb to ton 0.0005

Daily usage and the types of boats unknown. However, it can inferred that:
fishing boats use small outboards
boating and and skiing would use a combination of PWC, inboards, and sterndrives. PWC = jet skiis, and inboards and sterndrives are assumed to be powerboats for activity purposes.

Activity Assumptions

Generalized Emissions Method

Started with visitor days per day by generalized use (fishing, boating/skiing), from the applicant
Emissions are based on visitation, average emissions per boat hour, average hours per visit, while accounting for the number of people per boat
*vistor days / people per boat * hours per trip * average emissions per hour*

Visitation (boating only)

Activity	Annual Visitor Days
Boat fishing	8,407
Boating / water-skiing	29,145

from: Applicant

People per boat

not readily available from CARB
USCG survey data states:

People per Boat	low	high	Average for use	Activity
Power Boat	2.7	2.9	2.4	Boating / water-skiing
PWC	1.8	2.3		
All	2.4	2.4	2.4	Boat fishing

Daily Usage

not readily available from CARB - all data is presented annually
USCG survey data states:

Hours per Usage	low	high	Average for use	Activity
Power Boat	5.1	6	4.9	Boating / water-skiing
PWC	3.9	4.7		
All	4.5	5.7	5.1	Boat fishing

For Sites:

Fishing is assumed to be similar to avearage for all boats and based on the fleet average for outboards
Boating / water-skiing assumes the average of PWC and power boats, which is 2.4 hours per day per boat

*Average construction water use is expected to be approximately 350,000 to 400,000 gallons per day, primarily related to the pipelines for trench compaction, work at TRR East or TRR West, dust control, and lost water due to dredging of Funks Reservoir. Total water use for the Project associated with the HC facilities is roughly calculated to be approximately 175 to 200 million gallons.
