Postcards from Paula Mushrush and John Triska

Official Public Comment 169

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Paula Mushrush

Address: 2949 Main Street

City/State/Zip: Eureka, CA 95503

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Derek Latour

Address: 1945 East Ave

City/State/Zip: Hayward CA 94541

Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Dear Mr. Polos,

I am writing you in regards to the Environmental Impact Statement report recently released about the Trinity River Fishery Restoration. I strongly support the flow evaluation study done to assess the amount of water needed to increase the fish habitat. The preferred alternative does not seem to increase water flow enough to make a significant difference to this precious ecosystem.

As an alternative I suggest that 70% of the water in the lake be released to support the fishery minimum. This number was generated from the scientific tennet method of evaluation. Forty-Eight percent of the water is not enough to make a significant difference and improve economic stability in the Trinity watershed. 262-1

Thank you for your time,
Lauren Baiocchi

Dear mr. Polos:

I am writing to you about the EIS report concerning the trinity river. In the report, one of the recomendations was that the dam release 98% of the water to flow down the river. While I support the science behind the report and this recommendation in general, I still feel that this is not enough water.

There's a rule of thumb called the Tennet method which says that a river needs about 70% of its water to maintain healthy fisheries. This was indirectly addressed in the report, the 98% plan would require massive amounts of human input to maintain spawning beds for the salmon. The river salmon never needed bulldozers before the dam.

Please let 70% of the waterflow throughthe dam for the Trinity river.

Thank you,
Darius Paziradeh

RE: Trinity River Fisheries Restoration Environmental Impact Statement and Report (EIS/R)

Dear Mr. Polos:

The Trinity River Fisheries Restoration Environmental Impact Statement and Report (EIS/R) has been released and now is open for Public Comment. I support efforts to restore the Trinity River and its entire ecosystem by implementing a flow regime which allows the Trinity to keep at least 70 percent of its flow. } 264-1

Since Trinity Dam was completed in 1963, up to 90 percent of the Trinity River's water has been diverted for agriculture principally to the western San Joaquin Valley. As a result of decreased flows, fish populations declined by nearly 90 percent by the early 1990's. Next spring, the Interior Secretary will make a decision on how much more water will flow into the river to restore and maintain a healthy ecosystem and fishery. It is my hope that his recommendations will place the river first and ensure healthy stream flows to support this valuable fishery. Several points to consider during the public debate on this topic:

1. The Trinity River Act of 1955, authorizing the dams, specifically mandated that the fish and wildlife of the basin not be harmed. The Interior Secretary was directed to ensure that fish and wildlife in the basin were protected. However, since the dams were completed in 1963, water diversions have led to serious degradation of the entire fishery. The coho salmon now is listed under the Endangered Species Act, and steelhead are a candidate for listing.

2. The federal government's trust obligations to two Native American Tribes has gone unfulfilled for more than 36 years because of excessive water diversions from the Trinity River. The time has come for the federal government to begin fulfilling its legally mandated responsibilities to the Hoopa Valley and Yurok Tribes. } 264-2

3. Two decades of study and scientific evidence have given us the needed information to make a good decision for the Trinity. While the science and study that produced the Flow Evaluation Report are sound, the recommendations were limited by an assumption about the amount of water that could be available for the river. However, more water can be made available since the legislation creating the Trinity River Division, and later legislation, clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP.

4. When the Trinity is restored, the commercial and sport fishing, rafting, and tourism economies of the Northern California and Southern Oregon will rebound.

5. The Trinity River and its restoration program are completely independent

Letter from Phillip E. Fischer Dated October 26, 1999

264-1 Please see thematic responses titled "Fisheries."

264-2 Please see thematic response titled "Tribal Trust."

Letter from Phillip E. Fischer continued

of the CALFED process. Restoration of the Trinity River is mandated in the 1955 legislation authorizing construction of the Trinity River Division, the Trinity River Basin Fish and Wildlife Management Act of 1984, and the Central Valley Project Improvement Act (CVPIA). The CVPIA reaffirms the Trinity's unique position within the Central Valley Project (CVP) and clearly sets forth that restoration of the Trinity is to be considered independently from other California water issues.

6. The federal government's promise to maintain a healthy fishery in the Trinity River has been disregarded for the last 36 years, and past legislation mandated a flow decision by the end of 1996. If these legislated promises are not finally fulfilled, why should we believe any promises developed through CALFED? A restored Trinity River will allow Californians to have faith that the ongoing CALFED negotiations will produce meaningful improvement in our state water policies.

I appreciate in advance your consideration of these comments. As an avid fly fisherman and conservationist, I'd like to live to see the Trinity River ecosystem return to health and well being and support the fishery we know the river can sustain.

Sincerely,

Phillip E. Fischer
