Dear FIS Lak Team Members: 1721

I support a diversion of no more than 30 Percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the C.V.P. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank you.

Dear Flo EIR Team Members: 1722

I support a diversion of no more than 30 Percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the C.V.P. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank you,

Official Public Comment 1764

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Official Public Comment 1806

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,
