
Dear EIS/EIR Team Members:
I support a diversion of no more than 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river.

Legislation creating the Trinity River Division and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the Central Valley Project (CVP). Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You Walter Huwe

November 28,1999

Hon. Bruce Babbitt
Secretary of the Interior
c/o Mr. Joe Polos
Fish & Wildlife Service
1125 16th St., Rm 209
Arcata, CA 95521

Dear Secretary Babbitt and Mr. Polos,

Please restore at least 70% of the water flows to the Main stem Trinity River. The following are my reasons for urging you to take this action: } 2598-1

1. **Trinity River Act of 1955**, authorizing the dams, specifically **mandated that the fish and wildlife of the basin not be harmed**. The Interior Secretary was directed to ensure that fish and wildlife in the basin were protected. However, since the dams were completed in 1963, **water diversions led to a nearly 90 percent decline** in the fisheries by the early 1990's. The coho salmon now is listed under the Endangered Species Act, and steelhead are a candidate for listing.

2. The federal government's **trust obligations to two Native American Tribes have gone unfulfilled** for more than 36 years because of excessive water diversions from the Trinity River. The time has come for the federal government to begin fulfilling its legally mandated responsibilities to the Hoopa Valley and Yurok Tribes. } 2598-2

3. Two decades of study and scientific evidence have given us the needed information to make a good decision for the Trinity. While the science and study that produced the Flow Evaluation Report are sound, the recommendations were limited by an

Letter from José Mariscal Dated November 28, 1999

2598-1 Please see thematic responses titled "Fisheries."

2598-2 Please see thematic response titled "Tribal Trust."

Letter from José Mariscal continued

Hon. B. Babbitt & Mr. Polos, pg. 2

assumption about the amount of water that could be available for the river. However, more water can be made available since the legislation creating the Trinity River Division, and later **legislation, clearly gives Trinity fish and wildlife priority over the diversion of any water** to the CVP.

4. When the Trinity is restored, the **commercial and sport fishing, rafting, and tourism** economies of the Northern California and Southern Oregon **will rebound.**

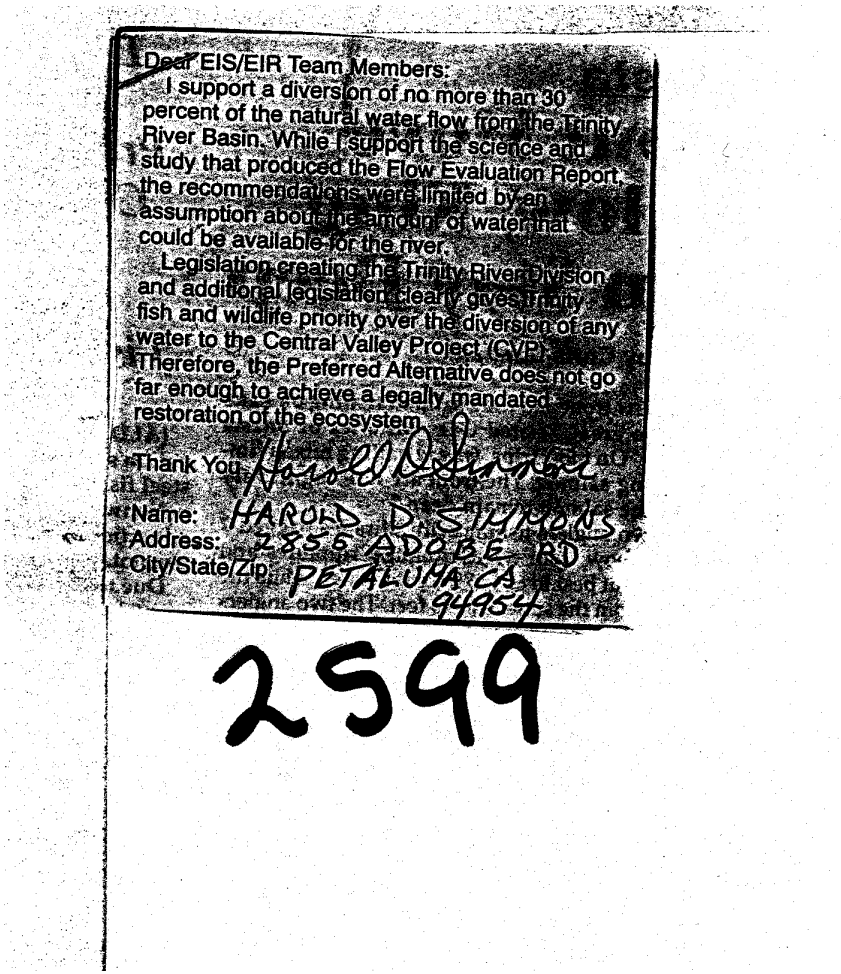
5. The Trinity River and its restoration program are completely independent of the CALFED process. Restoration of the Trinity River is mandated in the 1955 legislation authorizing construction of the Trinity River Division, the Trinity River Basin Fish and Wildlife Management Act of 1984, and the Central Valley Project Improvement Act (CVPIA). **The CVPIA** reaffirms the Trinity's unique position within the Central Valley Project (CVP) and **clearly sets forth that restoration of the Trinity is to be considered independently from other California water issues.**

6. The **federal government's promise to maintain a healthy fishery in the Trinity River has been disregarded for the last 36 years,** and past legislation mandated a flow decision by the end of 1996. If these legislated promises are not finally fulfilled, why should we believe any promises developed through CALFED? A restored Trinity River will allow Californians to have faith that the ongoing CALFED negotiations will produce meaningful improvement in our state's water policies.

I respectfully urge you to restore a minimum of 70% of Trinity River water to the river, its fish and wildlife and to those of us who use the river for recreation and our livelihoods. Thank you for your time and consideration of this request.

Sincerely,

José Mariscal



Dear EIS/EIR Team Members:
I support a diversion of no more than 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report the recommendations were limited by an assumption about the amount of water that could be available for the river.
Legislation creating the Trinity River Division and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the Central Valley Project (CVP). Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Arcata, CA 95521

Re: Trinity River Mainstem Fishery Restoration - Comments to DEIS/EIR

Dear Mr. Polos:

On behalf of the California Floaters Society, I am writing to urge the Secretary of the Interior, and associated federal, state and local agencies, to adopt the Maximum Flow Alternative in conjunction with the approval of the Trinity River Mainstem Fishery Restoration project. } 2600-1

California Floaters Society (CFS) is a network of recreational boaters who enjoy paddling whitewater around the state. Our members hail from as far north as Redding and Arcata, and as far south as San Diego. With the advertising and sponsorship of equipment retailers and related commercial entities, we host events designed to encourage the public to enjoy and protect California's waterways. We also publish a bi-monthly newsletter with a circulation of 1500, in which we discuss issues relating to our mission statement:

> "CFS embraces the philosophy of community in all river users and in the use of advancing river access, ecology, preservation and having fun. We promote shared knowledge, adventure and elevated safety and river rescue awareness."

As a non-profit educational and recreational organization, we feel strongly that the Maximum Flow Alternative is the best means for restoring native fish species populations and protecting the wild and scenic designation of the Trinity River and its surrounding watershed.

Thank you for recommending the adoption of the Maximum Flow Alternative in approving the Trinity River Mainstem Fishery Restoration project.

Yours very truly,

Suzanne A. Tollefson
Legal Advisor
California Floaters Society

Mr. Joe Polos
U.S. Fish and Wildlife Service
1655 Heindon Road
Arcata, Ca 95521

Dear Mr. Polos,

I came to Humboldt County in ~~the~~ 1955 to teach in the Psychology Department at Humboldt State University as the result of an interview in Iowa City, Iowa with the then Dean of H.S.U., Homer Balabanis. Dean Balabanis was a charming man and I was impressed by his description of the character of H.S..U. and its environs: a small college in a small town in a beautiful natural setting. At one point in describing the area he made a statement to the effect that there were 800 miles (I may be incorrect in remembering the exact figure here, but it was large) of free-flowing rivers and streams in Humboldt County which teemed with salmon and steelhead in the fall and winter. I was immediately "hooked!"

In the fall of that year, I packed my wife, two children, a small dog and "all our worldly possessions" in our Ford sedan and headed for California. I can see in my mind as clearly as if it were yesterday that point on the Trinity River where I got my first glimpse of a large number of salmon rolling and jumping in a long pool. I came to a screeching halt at the first available pull off! I could hardly believe my eyes. Dean Balabanis was correct.

It is apparent by now that I am an ardent fisherman. Immediately upon getting settled, I began to explore and fish the rivers of Humboldt, Del Norte, Siskiyou, and Trinity Counties.

All of the rivers fished very well at that time, but my favorites were the Trinity and the Salmon Rivers, because they produced numerous and large fish, and also, because they were indescribably beautiful.

During the years that followed,, the fishing gradually declined as the consequence of poorly designed over-logging practices, road construction and, in the case of the Trinity, grossly excessive water diversion. Today, the decline of the fish population has reached the point of near extinction.

All of the specific facts relating to the above observations have been well-documented and I see little point in including them in this letter.

I am writing, principally, as an individual who has loved and valued, since early childhood, the beauty in all of nature and the opportunity to immerse myself in activities which bring me in close contact with it. High on the list of sources of such activities are beautiful, free-flowing streams such as the Trinity once was. I love to fly fish and the Trinity lends itself extremely well to such a pursuit.

Others will write and speak of other items which are important concerning the current study of the Trinity, e.g., the economic and cultural considerations, other recreational

activities such as kayaking, white-water rafting, etc. Upon examining all such relevant data, I would hope that after all the years of delay and previous studies, the decision making entities will courageously address the known causes of the problems and take prompt action to restore this wonderful river to more closely resemble its earlier natural state.

2601-1

Sincerely yours,

Kenneth Humphry

Official Public Comment 2627

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Pam Mendelsohn

2657

December 5, 1999

To whom it may concern:

It is my understanding the original arrangement regarding Trinity River water diversion provided for no more than 34% of the water to be diverted from the river. I believe this is the proper amount to divert — no more.

Legislation says the fish and other wildlife that depend on the Trinity for their survival should have priority over the Central Valley Project. Farmers should not farm where there isn't water available! They can't steal it from other regions, so they will have to use what they have locally in a more conservative manner.

The Preferred Alternative is not adequate to restore the Trinity River. 2657-1

Thank you,

Jude Claire Power
PO Box 4958
Arcata, CA 95518

Letter from Jude Claire Power Dated December 5, 1999

2657-1 Regarding the adequacy of the Preferred Alternative, please see thematic response titled "No Action Alternative/Existing Conditions Scenario and Range of Alternatives."
