
Official Public Comment 2778

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Joella L. Gustavson

While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Official Public Comment 2820

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

To Whom It May Concern:

I'm writing in support of more water to be allocated for the Trinity River. Being a property owner, river resort operator and long time fishing guide on this unique river. For the past twenty-three years I've lived beside this river and I've witnessed startling results of additional flows being applied. From the ridiculous low flows of 150 cfs year round.

There is no question the anadramous fish will benefit from improved habitat and clean spawning gravels.

There is also no question that Trinity County in general will benefit from the economics of having a healthier river.

Since decisions were made many years ago to build the dam, create some reservoirs, control flooding, hydro and export water. The results had broad appeal to many.

Comprehensive studies by many qualified experts have been made to identify the problems facing anadramous fish in this river.

Increased flows will benefit the fishery and improve recreational activities for future generations. California will be enriched.

Sincerely,

James Munro

Official Public Comment

Regarding Trinity River water Diversion

I support a diversion of no more than 30% of the natural water flow from the Trinity River Basin. As I understand it, legislation creating the Trinity River Division, and Other legislation, gives the Trinity fish and wildlife priority over the diversion of any Water to the CVP. So your flow evaluation report should have allowed for more flow In the river. The Preferred Alternative does not go far enough to achieve a legally Mandated restoration of the ecosystem. 2869-1

Thank you for your attention.

Please include my comment in your evaluations.

Sincerely,

Dorie Barrett

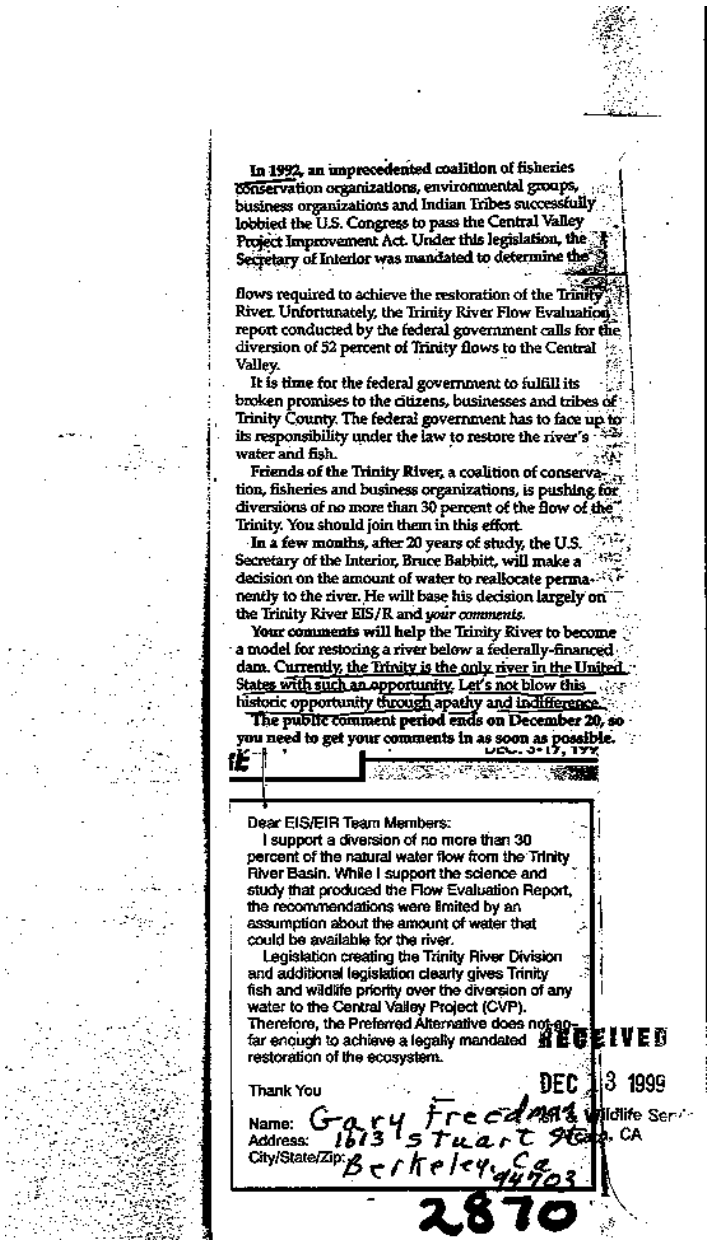
2869-1 Please see thematic responses titled "Fisheries." Regarding the adequacy of the Preferred Alternative, please see thematic response titled "No Action Alternative/Existing Conditions Scenario and Range of Alternatives."

Letter from Gary Freedman Dated December 13, 1999



In 1992, an unprecedented coalition of fisheries conservation organizations, environmental groups, business organizations and Indian Tribes successfully lobbied the U.S. Congress to pass the Central Valley Project Improvement Act. Under this legislation, the Secretary of Interior was mandated to determine the flows required to achieve the restoration of the Trinity River. Unfortunately, the Trinity River Flow Evaluation report conducted by the federal government calls for the diversion of 52 percent of Trinity flows to the Central Valley.

It is time for the federal government to fulfill its broken promises to the citizens, businesses and tribes of Trinity County. The federal government has to face up to its responsibility under the law to restore the river's water and fish.

Friends of the Trinity River, a coalition of conservation, fisheries and business organizations, is pushing for diversions of no more than 30 percent of the flow of the Trinity. You should join them in this effort.

In a few months, after 20 years of study, the U.S. Secretary of the Interior, Bruce Babbitt, will make a decision on the amount of water to reallocate permanently to the river. He will base his decision largely on the Trinity River EIS/R and *your comments*.

Your comments will help the Trinity River to become a model for restoring a river below a federally-financed dam. Currently, the Trinity is the only river in the United States with such an opportunity. Let's not blow this historic opportunity through apathy and indifference.

The public comment period ends on December 20, so you need to get your comments in as soon as possible.

Re: Trinity River Mainstream Fisheries RestorationEnvironmental Impact Statement and Report

Dear Mr. Polos:

I visit the Trinity River two three times a year for fishing canoeing, kayaking, camping and moteling, and for general relaxation. I have suffered poor fishing and restricted flows and have observed economic depression in the area. These conditions can and should be corrected by allowing the Trinity to keep at least 70% (90% would be better) of its flow. 2871-1

I appreciate the importance of the agriculture industry to California's economy, but I think it gets too much of Trinity water at the expense of users promised water but never delivered.

We were promised a healthy Trinity River fishery. Instead it has been decimated. Coho Salmon are an endangered species and steelhead are nearing the same status.

The Hoopa Valley and Yurok tribes have not received promised water. 2871-2

IT IS TIME TO PUT TRINITY WATER BACK IN THE TRINITY RIVER.

Sincerely

Hunter Owens
