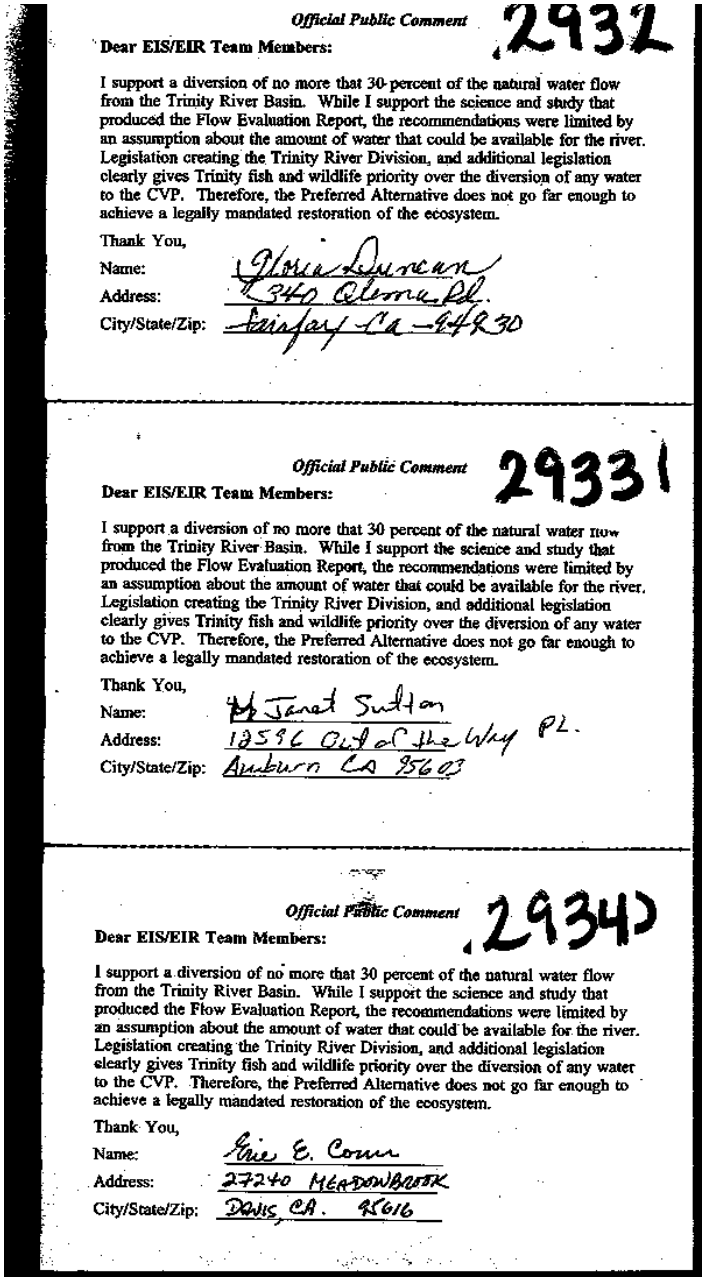
Postcards from Gloria Duncan, Janet Sultan, and Eric C. Conn



Official Public Comment 2932

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Gloria Duncan

Address: 340 Alcorn Rd.

City/State/Zip: Fairfax Ca 94930

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Dear Mr. Polos:
The Trinity River Flow Evaluation Report was good as far as it went, but didn't go quite far enough. The Preferred Alternative assumed limitations on available flow that was not diverted. Please support a divers than 30%, leavin fish & wildlife.
Thanks, J

Dear Mr. Polos;

We are writing to encourage you to restore the flow of the Trinity River. The Trinity River Mainstem Fisheries Restoration EIS would provide more water for the river, but not enough in our estimation. We would like to see water added that would keep at least 70% of the river flow. We want to see a healthy Trinity River (one of our long time favorites) and a strong restoration of fish populations – currently down 90%!

The EIS falls short. Again, more water for the Trinity. Correct a water (and fish) imbalance long overdue.

2981-1

Sincerely,

Thomas L. Branch

Joe,

Regarding Trinity River flow. I would like to see 70% set as a minimum. Fisheries inherent to the river and recreational pursuits should take precedence over agricultural/social concerns from hundreds of miles away.

If there a pressing central Valley needs I recommend they practice greater conservation.

BLUE RIDGE Landscaping

FAX (707) 451-0565

mber 6, 1999

Mr. Joe Polos
United States Fish & Wildlife Service
1125 16th Street, Room 209
Arcata CA 95221

Dear Mr. Polos

Never has time been more critical than NOW to save the Trinity River and our economically depressed community. Since inception of the dam, commercial power and agri business have steadily prospered at the great expense and degradation of the Trinity River and its anadromous fishery. The original frame work for the dam did not provide for California to become the "bread basket" of the world, while depleting our fisheries and other natural resources to extinction.

The frame work DID provide a fish hatchery to mitigate the dam; however, after 30 years, we have found that fish need more water to grow -- just as crops do. Tourism from a flourishing Trinity River is Trinity County's last home for economic survival.

The solution is simple; all data supports it. **More water is needed to restore the Trinity River.** Cotton and rice are not endangered. **Salmon, steelhead and the citizens of Trinity County are.**

I wholeheartedly support the **maximum flow** alternative. **Let if flow!**

Sincerely

GLENN BURTON

Dear Mr. Polos:

I am concerned about the Draft Trinity River Restoration Environmental Impact Statement and Report. I believe the Preferred Alternative recommended by the Flow Evaluation Report is inadequate to sustain a healthy river. While I support the science behind the study, I believe rivers require a higher percentage of flow to support a healthy fishery. As someone who has frequently visited the Trinity River area, I am concerned the Preferred Alternative doesn't do enough to sustain the river ecology. I support no more than a 30% diversion of flow in the Trinity River Basin.

Joe Polos
Trinity River EIS/R Project Manager
U.S. Fish and Wildlife Service
1125 16th St., Rm 209
Arcata, CA 95521

Dear Mr. Polos,

It is the position of the League of Women Voters of California (LWVC) to support measures which promote the management and development of water resources in ways that are beneficial to the environment. The League specifically supports measures that:
1. protect the natural environment in areas of both water origin and water use; and
2. reserve stream flows for protection of fish and wildlife habitat and other in-stream uses.

The legislation creating the Trinity River Division, as well as later legislation, clearly gives Trinity River fish and wildlife priority over the diversion of any water to the Central Valley Project. The League of Women Voters of Humboldt County, using the LWVC positions stated above, supports the findings of scientific studies which have determined that a river needs at least 70 percent of its flow to maintain a healthy fishery. 3010-1

Sincerely,

Byrd A. Lochtie

Byrd A. Lochtie, President

Rudy Ramp

Rudy Ramp, Director

The League of Women Voters, a nonpartisan political organization, encourages the informed and active participation of citizens in government and influences public policy through education and advocacy.
