**Dear EIS/EIR Team Members:**

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

**Dear EIS/EIR Team Members:**

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

US Fish & Wildlife Service
Arcata, CA

9 December 1999

Members of the EIS/EIR Team,

Please consider the following comments on the Trinity River EIS/EIR:

The Preferred Alternative needs to be improved if you want to provide, as I believe you are legally required to, an effective restoration of the ecosystem. The law that established the Trinity River Division, and others, give fish and critters priority over sending water to the Central Valley Project. That's why no more than 30% of the natural water flow from the Trinity River Basin should be diverted for any other use.

3078-1

That's it, short and sweet. This is a great opportunity, folks, and we don't get many of them, so let's do it right. I know you will.

Fred Hummel (former salmon troller and mayor of Brookings)

Re: Comments of GOLD COUNTRY PADDLERS re Trinity River Mainstem Fisheries Restoration Environmental Impact Statement and Report ("Trinity EIS/R")

Dear Mr. Polos,

GOLD COUNTRY PADDLERS is California's largest whitewater paddling club, with over 500 members. Our members have kayaked throughout the Trinity basin, and it is one of our favourite river systems. But as boaters we are keenly aware that the Trinity, beautiful as it is, is not what it could be.

Since the Trinity's dams were completed in 1963, up to 90 percent of the river's water has been diverted for agriculture, principally to marginal lands in the western San Joaquin Valley. Decreased flows have limited whitewater recreation potential, and fish populations have fallen nearly 90 percent.

The Trinity EIR/S's Preferred Alternative still allows over half the water to be diverted from the basin. Science has determined that a river needs at least 70 percent of its flow to maintain a healthy fishery. Similarly, the river basin's recreational economy deserves to receive more than merely half of the income potential represented by its water. } 3079-1

We are writing in support of the implementation of a flow regime that allows the Trinity to keep at least 70 percent of its water, for these and the following reasons:

1. When the Trinity is restored, the commercial and sport fishing, whitewater recreation, and tourism economies of Northern California and Southern Oregon will rebound. Fisheries science is complex, but the relationship between water in the river and whitewater recreation potential is not. More water means more boating, and that means more boaters spending more dollars in the Trinity basin's local economy. The Trinity River is a unique resource from a whitewater boating perspective. It offers over 75 miles of class II through class V whitewater, including high quality stretches of river suitable for novices, intermediates, and experts alike. The number of whitewater canoeists, rafters, and kayakers has increased exponentially in the last few years, and consequently, the Trinity's potential has never been greater to attract the business of whitewater enthusiasts. } 3079-2

2. The Trinity River Act of 1955, in authorizing the dams, specifically mandated that the fish and wildlife of the basin not be harmed. But since the dams were completed in 1963, water diversions have caused a nearly 90 percent decline in the fisheries. The coho salmon now is listed under the Endangered Species Act, and steelhead are a candidate for listing.

3. The federal government's trust obligations to two Native American tribes have gone unfulfilled for more than 36 years because of excessive water diversions. The time has come to meet our obligations to the Hoopa and the Yurok. } 3079-3

4. Two decades of scientific study have now given us the knowledge to make good decisions regarding the Trinity. While the science that produced the Flow

## Letter from Paul Clark Dated December 9, 1999

3079-1 Please see thematic responses titled "Fisheries."

3079-2 Thank you for your comment. Your comment has been noted. No response is required.

3079-3 Please see thematic response titled "Tribal Trust."

## Letter from Paul Clark continued

Evaluation Report is sound, its' recommendations were limited by narrow assumptions about the amount of water available for the river. More water can be made available since the legislation creating the Trinity River Division, and later legislation, gives Trinity fish and wildlife clear priority over the diversion of any water to the CVP.

5. The Trinity River and its restoration program are completely independent of the CALFED process. Restoration of the Trinity River is mandated in the 1955 legislation authorizing construction of the Trinity River Division, in the Trinity River Basin Fish and Wildlife Management Act of 1984, and in the Central Valley Project Improvement Act (CVPIA). The CVPIA reaffirms the Trinity's unique position in the CVP, and clearly sets forth that restoration of the Trinity is to be considered independently from other California water issues.

6. The federal government's promise to maintain a healthy fishery in the Trinity River has been ignored for 36 years. Past legislation mandated a flow decision by the end of 1996. If these legislated promises are not finally fulfilled, it will undercut the credibility of promises subsequently to be developed through CALFED. A restored Trinity River will give Californians faith that the ongoing CALFED negotiations will produce meaningful improvement in our state's water policies.

Thank you for considering our comments.

Very truly yours,

GOLD COUNTRY PADDLERS

Arcata, CA. 95521

Please return the Trinity River to the Salmon and the People of the NorthCoast. No more than 10% of the River's Flow should be Allowed to Flow South or Be Diverted. Better yet Remove the DAMN DAM. Let ARCO and others Conserve water and use drip Irrigation Like I Do. We can no longer play politics with nature and Wildlife. We can no Longer BASTARDIZE Science To Promote Profits.

It would be difficult to design a more effective means to eradicate wildlife than the current system of water diversion on the Trinity River, Although I Suppose we could heat the water to 212° F.

If we do not correct this problem now (Yes) then when?

I must add that the impotence of Regulatory Agencies never ceases to Amaze me. It appears that they were formed to bear witness to destruction and extinction and even to justify or facilitate same rather than protect and defend the public trust, clean water, and Wildlife survival.

Who will do it if you don't? Save the Trinity!

Respectfully

3080-1

## Letter from Earl Bootier Dated December 13, 1999

3081

Dear EIS/EIR Team Members:
I support a diversion of no more than 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river.
Legislation creating the Trinity River Division and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the Central Valley Project (CVP). Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: June MAselbas & Ray Katz
