
Official Public Comment 3113

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Dear Mr Polis,

I am favor of more water for the fishery of the Trinity River. I live in a part of Nevada where the water "belongs" to a small group of farmers. This means that during the summer, our river beds are dry, or that highly polluted waters that have leached chemicals from the fields are allowed to flow back into the river and ruin them for the rest of the population.

Please consider the recreational value of these rivers for the mass of the people, and the restoration of these rivers to there natural state. I believe that the farmers could be much more efficient in their use of the water and that all people should be able to benefit from these natural resources that should belong to all. } 3114-1

Sincerely,

John Kowalski

Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Official Public Comment 3154

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Official Public Comment 3195

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Tom E. Dunn

Address: 11001 Takilma Rd

City/State/Zip: Cave Junction, OR, 97523

I support less agricultural/domestic water diverted to the areas other than the Trinity River Basin. Maximum priority should be given to anadromous fish restoration to at least the runs of 70 years ago.
