
Official Public Comment 3228

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Chris Medinger

Official Public Comment 3269

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Official Public Comment 3310

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Ken Deaton

3351

Dear EIS/EIR Team Members:

I support a diversion of no more than 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river.

Legislation creating the Trinity River Division and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the Central Valley Project (CVP). Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You

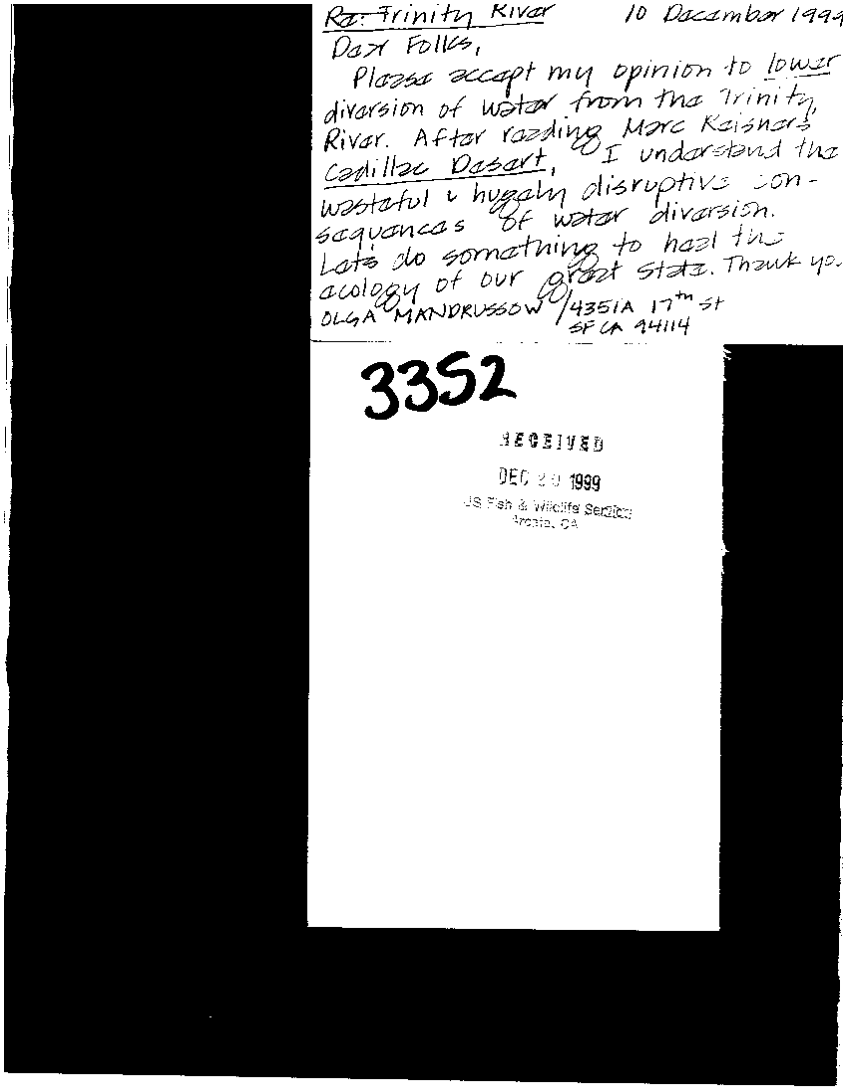
Letter from Olga Mandrussow Dated December 10, 1999



Re: Trinity River 10 December 1999

Dear Folks,

Please accept my opinion to lower diversion of water from the Trinity River. After reading Marc Reisners Cadillac Desert, I understand the wasteful & hugely disruptive consequences of water diversion. Lets do something to heal the ecology of our great State. Thank you.

Dear Mr. Polos,

I am writing about the Public Comment concerning the Trinity River Restoration Act concerning returning Flow to the Trinity River in No. California.

I believe the amount of Flow to the Trinity River should be increased to the maximum amount possible instead of the current percentage of ~ 1/3 the normal Flow.

The Friends of the Trinity River council recommends a Flow regime of 70% of the total water be released in the Trinity River. A 90% decrease in Salmon, steelhead runs and the effects on juveniles as well as the listing of coho, should mandate this. The future listing of chinook & steelhead may also have on the decision. Save the tax payers a lot of $ in the long run, restore the river biology and stop contributing to the corporate degradation of the central valley all with 1 decision.

Give the Trinity 70%.

Steve Hasslinger

Willow Creek, CA resident.

Dear Mr. Polos:

As one who has fished this river for years and been witness to it's problems, I urge you to do whatever is necessary to get this corrective Legislation passed.

3355

November 28,1999

Hon. Bruce Babbitt
Secretary of the Interior
c/o Mr. Joe Polos
Fish & Wildlife Service
1125 16th St., Rm 209
Arcata, CA 95521

Dear Secretary Babbitt and Mr. Polos,

Please restore at least 70% of the water flows to the Main stem Trinity River. The following are my reasons for urging you to take this action: 3355-1

1. **Trinity River Act of 1955,** authorizing the dams, specifically **mandated that the fish and wildlife of the basin not be harmed.** The Interior Secretary was directed to ensure that fish and wildlife in the basin were protected. However, since the dams were completed in 1963, **water diversions led to a nearly 90 percent decline** in the fisheries by the early 1990's. The coho salmon now is listed under the Endangered Species Act, and steelhead are a candidate for listing.

2. The federal government's **trust obligations to two Native American Tribes have gone unfulfilled** for more than 36 years because of excessive water diversions from the Trinity River. **The time has come for the federal government to** begin fulfilling its **legally mandated responsibilities to the Hoopa Valley and Yurok Tribes.** 3355-2

3. Two decades of study and scientific evidence have given us the needed information to make a good decision for the Trinity. While the science and study that produced the Flow Evaluation Report are sound, the recommendations were limited by an assumption about the amount of water that could be available for the river. However, more water can be made available since the legislation creating the Trinity River Division, and later **legislation, clearly gives Trinity fish and wildlife priority over the diversion of any water** to the CVP.

Letter from Jennifer Blackwelder Dated November 28, 1999

3355-1 Please see thematic responses titled "Fisheries."

3355-2 Please see thematic response titled "Tribal Trust."

Letter from Jennifer Blackwelder continued

4. When the Trinity is restored, the **commercial and sport fishing, rafting, and tourism** economies of the Northern California and Southern Oregon **will rebound**.

5. The Trinity River and its restoration program are completely independent of the CALFED process. Restoration of the Trinity River is mandated in the 1955 legislation authorizing construction of the Trinity River Division, the Trinity River Basin Fish and Wildlife Management Act of 1984, and the Central Valley Project Improvement Act (CVPIA). **The CVPIA** reaffirms the Trinity's unique position within the Central Valley Project (CVP) and **clearly sets forth that restoration of the Trinity is to be considered independently from other California water issues.**

6. The **federal government's promise to maintain a healthy fishery in the Trinity River has been disregarded for the last 36 years**, and past legislation mandated a flow decision by the end of 1996. If these legislated promises are not finally fulfilled, why should we believe any promises developed through CALFED? A restored Trinity River will allow Californians to have faith that the ongoing CALFED negotiations will produce meaningful improvement in our state's water policies.

I respectfully urge you to restore a minimum of 70% of Trinity River water to the river, its fish and wildlife and to those of us who use the river for recreation and our livelihoods. Thank you for your time and consideration of this request.

Sincerely,

Jennifer Blackwelder
