Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Joe Krovoza

Address: 1608 Olympic Blvd.

City/State/Zip: Davis, CA 95616

Arcata, CA

Re: Trinity River Mainstream Fishery Restoration

Dear Secretary Babbitt:

As members of the California State Legislature, we ask for your strong support and action to provide for the restoration of the Trinity River.

Protecting and restoring our western rivers is a fundamental responsibility of government at all levels. We in California wish to see strong federal, state, and local agency action to protect our waterways, improve natural habitat, restore salmon runs and save these mighty rivers for future generations of Americans.

- The Trinity River Act of 1955 authorized the Trinity River Division of the Central Valley project. In order to protect the Trinity River Basin area of origin, Congress directed the Secretary of Interior to ensure the preservation and propagation of fish and wildlife in the basin as a condition of diversion of water. However, since the Trinity and Lewiston dams were completed in 1963, water diversions led to a nearly 90 percent decline in the fisheries by the early 1990s. The coho salmon now is listed under the Endangered Species Act, and steelhead are a candidate for listing.

- The federal government's trust obligations to two Native American Tribes have gone unfulfilled for more than 36 years because of excessive water diversions from the Trinity River. The time has come for the federal government to fully fulfill its legally mandated responsibilities to the Hoopa Valley and Yurok Tribes. } 3959-1

- Two decades of study and scientific evidence have given us the needed information to make the right decision for the Trinity. **We urge you to take the necessary action to restore the flow regime outlined in the Trinity River Flow Evaluation Final** } 3959-2

3959-1 Regarding tribal trust, please see thematic response titled "Tribal Trust."

3959-2 Please see thematic responses titled "Fisheries."

Letter from Senator Wesley Chesbro, California State Senator, continued

Report (June 1999) as supported by the US. Fish and Wildlife Service, Hoopa Valley Tribe, and Trinity and Humboldt Counties. 3959-2 cont'd

We would ask for your timely action on this important issue. You have the opportunity to leave a legacy that established a national model for recovering river ecosystems. Restoration of the Trinity River will have a profound effect on reestablishing economic and cultural vitality to the North Coast region of California. Local economies within the Trinity River basin and surrounding communities, which are highly dependent upon natural resource-based timber and fishing industries, would benefit directly and indirectly from a restored Trinity fishery.

The federal government's promise to maintain a healthy fishery in the Trinity River has been disregarded for the last 36 years, and past legislation mandated a flow decision by the end of 1996. A restored Trinity River will allow Californians to have faith that the ongoing CALFED negotiations will produce meaningful improvement in our State's water policies.

In summary, the Trinity River is a unique and irreplaceable resource. Its restoration is of paramount concern to us and to the citizens of California whom we represent.

We support your strong and timely action to restore this great river.

Sincerely,

Senator Wesley Chesbro

Official Public Comment 3960

Dear EIS/EIR Team Members:

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.

Thank You,

Name: Ryan Vita

I support a diversion of no more that 30 percent of the natural water flow from the Trinity River Basin. While I support the science and study that produced the Flow Evaluation Report, the recommendations were limited by an assumption about the amount of water that could be available for the river. Legislation creating the Trinity River Division, and additional legislation clearly gives Trinity fish and wildlife priority over the diversion of any water to the CVP. Therefore, the Preferred Alternative does not go far enough to achieve a legally mandated restoration of the ecosystem.
