

[Jepson Flora Project: Jepson Interchange for California Floristics](#)

***Sidalcea keckii* Wiggins**

MALVACEAE

(unverified) ©

Information from the Index of California Plant Names ([ICPN](#))

Initial Editorial Analysis 9 Dec 2009

[Source of Report for California](#) The Jepson Manual [Ed. 1]

[Initial Editorial Comments](#) "PRESUMED EXTINCT" in The Jepson Manual [Ed. 1].

Correspondence and Comments Subsequent to Initial Analysis

[Correspondence 1](#) 24 Aug 2004 e-mail from Jeff Greenhouse see Comment 1

[Editorial Comments 1](#) Correspondence 1 indicates: that the California Native Plant Society (California Native Plant Society). 2004. Inventory of Rare and Endangered Plants (online edition, v6-04c) includes the report that *Sidalcea keckii* has been "Rediscovered in 1992 by J. Stebbins and K. Kirkpatrick"; that John Stebbins, in an 8 Jan 2004 e-mail [to Greenhouse], stated "the populations at Tivy Mtn. are alive and well ... I have surveyed the type locality (White River in S. Tulare County) twice and although the habitat is still intact have not seen it. The population near Porterville where I 'rediscovered' it in 1991 is now an orchard and a quarry!. So it is quite possible that our Tivy Mtn. Fresno Co. site is indeed the only one extant."

[Correspondence 2](#) 24 Aug 2004 e-mail from Bruce Baldwin, forwarded from Jeff Greenhouse see Comment 2

[Editorial Comments 2](#) Correspondence 2 confirms that *Sidalcea keckii* Wiggins is both extant and worthy of taxonomic recognition, based on the fact that Katarina Andreasen sampled it in her investigation of *Sidalcea* [at UC Berkeley] and confirmed that it was distinct from its sister-group, [Sidalcea diploscypha](#), as reported in Andreasen, K. and Baldwin, B. G. 2003. Reexamination of relationships, habitat evolution, and phylogeography of checker mallows (*Sidalcea*; Malvaceae) based on molecular phylogenetic data. American Journal of Botany 90: 436-444.

[Correspondence 3](#) Treatment and author notes submitted for The Jepson Manual [Ed. 2] by Steven R. Hill see Comment 3

[Editorial Comments 3](#) Correspondence 3 confirms that for The Jepson Manual [Ed. 2] Sidalcea keckii Wiggins is to be recognized and treated as native, as well as extant, in CA.

Editorial Summary and Current Status

[Editorial Summary](#) addition, rediscovered in California since The Jepson Manual [Ed. 1], essentially

[Current Status](#) JFP-1, accepted name for taxon native to CA

[Current Status](#) The Jepson Manual [Ed. 2]

[Authority](#)

[Current Status Date](#) 9 Dec 2009
