

Personal Communication Form

Name of person being cited
Joe Hobbs
Occupational title of person being cited
Staff Environmental Scientist
Division/branch/unit of person being cited
Wildlife Management Branch
Employer/organization of person being cited
California Department of Fish and Game
City and state of source's organization
Sacramento, CA
Date/time of personal communication
January 11, 2010
Type of communication (i.e., phone call, meeting, e-mail, etc.)
Phone call
Topics discussed
Discussed the size and range of two Cache Creek Tule elk sub-herds to determine if either of the herds has been documented within the boundary of the Primary Study Area. Although they are free-ranging, and although the map of the hunt zone for the East Park Reservoir sub-herd overlaps with several Primary Study Area facilities, Tule elk have not been documented within the Primary Study Area.
Additional notes (or details about information being cited)
Map of East Park Reservoir sub-herd hunt zone (provided by Joe Hobbs) was compared to the map of the Primary Study Area to determine that the hunt zone overlaps with the northern half of the footprint of the proposed Sites Reservoir, as well as with the Stone Corral, Peninsula Hills, and Saddle Dam recreation areas, Funks Reservoir, Holthouse Reservoir, most roads (excluding Sulphur Gap, Com, and Lurline roads), and portions of the Delevan Pipeline and Tehama-Colusa and GCID Main canals. Herd numbers cited were based on the most recent elk management plan that Joe Hobbs had access to.
Name and office of person who had communication with source
Amy Lyons, California Department of Water Resources
