The 2016 State Energy Efficiency Scorecard

SEPTEMBER 26, 2016

Research Report U1606

Author(s)

Weston Berg, Seth Nowak, Meegan Kelly, Shruti Vaidyanathan, Mary Shoemaker, Anna Chittum, Marianne DiMascio, and Chetana Kallakuri

Description:

This tenth edition of the *State Energy Efficiency Scorecard* measures the progress of state policies and programs that save energy while also benefiting the environment and promoting growth. We use data vetted by state energy officials to rank states in six categories—utility programs, transportation, building energy codes, combined heat and power, state initiatives, and appliance standards. California and Massachusetts tied for first place in this year's *Scorecard*. Rounding out the top five were Vermont, Rhode Island,

Connecticut, and New York. The most-improved states were Missouri, Maine, and Michigan. The *Scorecard* shows that energy efficiency is a key resource in these states and others, with utilities spending approximately \$7.7 billion in 2015 for efficiency programs nationwide, up from approximately \$7.3 billion in 2014.

Overview / Mission

The American Council for an Energy-Efficient Economy (ACEEE), a nonprofit, 501(c)(3) organization, acts as a catalyst to advance energy efficiency policies, programs, technologies, investments, and behaviors. We believe that the United States can harness the full potential of energy efficiency to achieve greater economic prosperity, energy security, and environmental protection for all its people.
