a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H4 represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

*Alternative 4 H2² represents the enhanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

LLT (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H4 represents the high delta outflow scenario of Alternative 4.

^b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

The Elevations are based on National Geodetic Vertical Datum of 1929 (NGVD 29)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H2 represents the enhanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

LLT (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H1 represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.
 Alternative 4 H4 represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

C.34. San Joaquin River at Jersey Point Salinity

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H4 represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H2 represents the enhanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.
 Alternative 4 H1 represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.
 Alternative 4 H4 represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H1 represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H3 represents the fall X2 scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.
 Alternative 4 H3 represents the fall X2 scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H3 represents the fall X2 scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 LLT (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.
 Alternative 4 H2 represents the enhanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

*Alternative 4 H3" represents the fall X2 scenario of Alternative 4.

Critical (25%)	0	0	0	0	0	0	0	0	0	0	0	0

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H1 represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H3 represents the fall X2 scenario of Alternative 4.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

^a Based on the 16-year simulation period

^b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H1 represents the low delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H2 represents the enhanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H4 represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 LLT (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H2 represents the enhanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H4 represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period
 b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)
 Positive differences are highted in red color which indicate increase in Salinity (EC)
 "LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.
 Alternative 4 H2 represents the enhanced spring delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.

Alternative 4 H4 represents the high delta outflow scenario of Alternative 4.

a Based on the 16-year simulation period

b As defined by the Sacramento Valley 40-30-30 Index Water Year Hydrologic Classification (SWRCB D-1641, 1999)

Positive differences are highted in red color which indicate increase in Salinity (EC)

"LLT" (Late Long-Term) indicates Alternatives that are simulated with 2060 climate change and sea level rise.
