

Project: North Delta Flood Control and Ecosystem Restoration Project

Description: The North Delta Flood Control and Ecosystem Restoration Project consists of flood control and habitat improvements where the Mokelumne River, Cosumnes River, Dry Creek, and Morrison Creek converge. Flood flows and high water conditions in this area threaten levees, bridges, and roadways. The project will reduce flooding and provide contiguous aquatic and floodplain habitat along the downstream portion of the Cosumnes River Preserve by modifying levees on McCormack-Williamson Tract and at Grizzly Slough.

Reference Number: 3860-P1E-332

Implemented By: Reclamation District 348 - New Hope Tract and Reclamation District 2110 McCormack Williamson Tract

Objective: Improve Flood Protection while restoring Floodplain and Tidal Marsh habitats

Type: Restoration, Research/Planning (including Science)

Total Cost: \$44,000,000.00

Project Status: Project Implementation

On Time?: Yes **Within Scope?:** Yes **Within Budget?:** Yes

Estimated Completion: 6/30/2021 **Actual Completion:**

Associated Counties: Sacramento, San Joaquin

Contribution Sources	Contribution Date	Contribution Amount
Other State Funds	6/10/2014	\$1,200,000.00
Prop. 1E, Delta Levees System Integrity Program	8/12/2013	\$28,000,000.00
		\$29,200,000.00

Project Metric	Metric Topic
Restoration	Ecosystem: Agricultural Lands
Restoration	Ecosystem: Lowland Floodplains
Restoration	Ecosystem: Shallow Water/ Marsh
Research/Planning (including Science)	Feasibility Studies -- Ecosystem
