

Folsom Lake Intake Project

Background

Summary

Objectives

- Construct a temperature control device for EID's intake facilities in order to preserve the cold-water pool in Folsom Lake to help enhance downstream habitat for anadromous fish species
- Replace selected existing pumps with more reliable and efficient equipment
- Provide adequate raw water supply to meet the El Dorado Hills Water Treatment Plant's permitted capacity
- Maintain water delivery service during construction

Updates

Folsom Lake Intake Project Courtesy Notice

Starting in September, barges equipped with a crane and construction materials will be towed and secured off the shoreline and in-water work will begin.
