Project Details

Title: Upper Sacramento River Anadromous Fish Habitat Restoration Program

Summary:

Reclamation proposes to create new side channels, modify existing side channels, and place gravel and instream habitat structure at several sites in the Sacramento River below Keswick Dam to Red Bluff Diversion Dam. Gravel would be placed to improve spawning at specific locations and to replenish spawning gravel downstream that is not replaced by upstream sources. Restoration actions included under the Proposed Action would occur through the year 2030.
