(1) Figures are generated from the most current version of the GIS data. Files dating from 1984 through 1992 were reprocessed with a standardized county line in the Albers Equal Area projection, and other boundary improvements.

(2) Acreage for Water changed in 2000 when refinements were made to lake and river boundaries from imagery and 1:24,000-scale quadrangles.

(3) Due to the incorporation of digital soil survey data (SSURGO) during this update, acreages for farmland, grazing and other land use categories may differ from those published in the 2000-2002 California Farmland Conversion Report. Grazing Land increased relative to Farmland of Local Importance as a result of the automated selection of qualifying soil units using SSURGO and assessment of long-term idling of dryland farming areas.

(4) Acreage for Water changed in 2006 when refinements were made to the Sacramento River channel boundary.

PERCENTAGE OF COUNTY INVENTORIED: 100%
