How results were used

Sacramento River rotary-screw trap data was collected and integrated into the Daily Divertible Flow Tool (DDFT) to evaluate fish passage. The relationship between flows and fish presence can be evaluated in several tabs towards the back of the spreadsheet. The “Fish\_Count\_OneYr” tab include figures of Sacramento River flow and storable flow vs fish count.

\* The GCID Pumps were shut down on 11-1-13. The GCID pump rate located on the GCID daily trap summary is gravity fed water resulting from the difference in elevation. This flow measurement is taken at the stony creek siphon south of the GCID Pump Station. Pumps will be shut down until further notice.
